	red beans in the region remained stable in January compared to December. However, compared to the previous year, maize increased 34.7, 38.3, and 47.7 percent in the San Salvador, Tegucigalpa, and Managua markets, respectively. Bean prices, on the other hand, increased from December to January by 16.6 and 28.9 percent in Honduras and Nicaragua, respectively, while El Salvador reported a decrease of 7.6 percent, since the *postrera* harvest had near-average yields.	levels, albeit with a slow recovery.
Regional	Annual inflation continues to increase, with year-on-year variations of 6.5, 6.2, and 7.7 percent in El Salvador, Honduras, and Nicaragua, respectively. The food sector increased by 9.0, 7.5, and 10.3 percent in El Salvador, Honduras, and Nicaragua, respectively, from January 2021 to January 2022, making it the sector with the largest increases.	Fuel prices are expected to remain high throughout the outlook period, which will contribute to maintaining current inflation levels, including high food prices, specifically staple grains, but also animal protein and vegetable sources. Only the Honduran government is expected to subsidize fuel prices.
Regional	Despite the stability in fuel prices between December 2021 and January 2022, diesel still reported increases of 35.3, 28.5, and 33.6 percent from January 2021 in El Salvador, Honduras, and Nicaragua, respectively. At the moment, Honduras is the only country with a fuel subsidy. In the case of fertilizers, urea prices in January were still high, with month-on-month variations of 16.6 and 25 percent in Honduras and Nicaragua, respectively. However, compared to January 2021, they had increased by 133.8, 188.9, and 158.7 percent in El Salvador, Honduras, and Nicaragua, respectively.	White maize prices are projected to be high for all three countries throughout the period analyzed — up to 56 percent above the five-year average.
Regional		Regarding red beans, despite a near-average *apante*/*postrera tardía* season, prices in all three countries are also projected to exceed the average by up to 50 percent throughout the outlook period. This is because there will not be enough to compensate for the losses of the two previous seasons, and also because of the
