Key Messages

- **Between September 2026 and January 2027, Crisis (IPC Phase 3) outcomes are expected to remain widespread, while Emergency (IPC Phase 4) outcomes will persist** in Port-au-Prince, Cité Soleil, Cornillon, and Ganthier. In these areas, insecurity, displacement, and the erosion of livelihoods continue to limit poor households' access to food.

- **The resurgence of violence continues to disrupt markets and livelihoods.** In Kenscoff, 4,238 newly displaced people have joined the approximately 5,840 people displaced in July. Pressure also remains high in Artibonite, downtown Port-au-Prince, the Cul-de-Sac Plain, and around Gressier and Léogâne. Improvements in security were observed in some areas, along with the return of some displaced households, but any improvements remain too localized to offset overall disruptions.

- **Dry conditions associated with El Niño and the rainfall deficit, which has persisted for more than 70 days, have reduced soil moisture in Centre, Ouest, Sud, and Sud-Est.** Water shortages have also been reported along the southern coast, while dry conditions have resulted in crop losses, particularly for maize. Sorghum and pigeon peas are also affected, but the impacts are expected to become more apparent in the coming months, as these crops are typically harvested toward the end of autumn. The expected strengthening of El Niño and likely persistence of associated rainfall deficits are increasing the risk of below-average autumn and winter harvests, which would further reduce food stocks and agricultural income.

- According to the Food Security Cluster, **1.8 million targeted beneficiaries are still not receiving sufficient humanitarian food assistance**. At the same time, the **2026 SMART survey** results indicate a deteriorating nutrition situation. The prevalence of **global acute malnutrition (GAM),** based on weight-for-height z-scores, increased from **5.1 percent in 2023 to 7.4 percent in 2026**. This level of 7.4 percent, corresponding to the Alert phase (5–9.9 percent), indicates a deterioration in the nutrition situation in a context where humanitarian food assistance coverage remains insufficient.
